

How Are Correct Toes Different From Other Toe-Spacing Products on the Market?

Correct Toes appliance seen here with Injinji toe socks.

1. Correct Toes go beyond simply “spacing your toes.” Correct Toes is a podiatrist-designed product that **places your toes in the correct anatomical position in relation to the ground and to one-another**. It helps you mimic the natural barefoot position that is commonly seen in people who have gone barefoot most of their lives.
2. Correct Toes are **designed by Dr. Ray McClanahan, a podiatric physician**, or foot doctor. Dr. McClanahan is an expert in foot anatomy and human physiology. Correct Toes are **clinically tested** on hundreds of patients, with outstanding success.
3. Most toe-spacing products are made to be worn while you are barefoot. Correct Toes are **designed to be worn in shoes** during weight-bearing activity, such as running, walking, hiking, and standing. They can also be used barefoot around your home or when you are practicing yoga, tai chi, qigong, or other movement arts.
4. Correct Toes **promote balance**. This is incredibly useful in yoga practice and is helpful for people with Parkinson’s Disease. It is also useful for senior citizens in preventing fatal falls—a common injury among the elderly.
5. Correct Toes are constructed of medical-grade silicone, which makes them both flexible and highly durable. Correct Toes are comfortable and built to last. **Correct Toes is a top-quality product!**
6. We believe in supporting our **economy** and our **environment**. Correct Toes are made in the USA, and the packaging is re-usable and recyclable.
7. When used according to package instructions, Correct Toes offers customers a method of permanently fixing foot and ankle ailments, without having to resort to custom orthotics (\$-hundreds) or surgery (\$-thousands). Correct Toes are a tremendously **reasonably-priced** alternative.

Correct Toes is a superior product.

We offer a money-back guarantee, so there is no risk in trying them!
